Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1882 edition.

Excerpt: . chapter X. refractive disorders. There are several ways of determining the refraction of an eye. It may be found by means of the incident light; by means of the lens necessary to use in order to see the upright image; by means of the enlargement of this image; by the distance at which the inverted image is formed; and by the enlargement of this image. The way most used, however, because the simplest and easiest, is that of finding the lens required by the examiner, (any ametropia of his being first corrected, and the accommodation of both examiner and patient being fully relaxed,) to clearly and distinctly see the fund us of the eye under examination. Myopia.--It will be remembered that in myopia, the rays converge to a focus before reaching the retina. In other words the principal focus of the dioptric...
